VI. DISASSEMBLY

14
A receiver pin
COBRA M-119" Profile

DISASSEMBLY
To uncock the hammer, grasp the weapon by the grip with your left hand and release the trigger (Fig. 11A). Press the hammer back to the rear of the weapon. This will cause the hammer to be cocked in the hammer cocked position (see Fig. 11A).
to remove the hammer from the weapon.

To remove the hammer:

1. Insert a flat-head screwdriver or a similar tool into the trigger guard and press the hammer pin.
2. Using the screwdriver, rotate the hammer counterclockwise until it stops.
3. Push the hammer pin through the hole in the frame.
4. Pull the hammer out of the receiver.

C. Finish.

The hammer is now removed from the weapon.
When the hammer is cocked, the next pull of the trigger resets the hammer back to the cocked position once again. The hammer is always cocked when the gun is not in use. When the trigger is pressed, the hammer falls, releasing the sear and allowing the bullet to be fired. The hammer must be reset to the cocked position before firing again.
